PRODUCT SPECIFICATION SHEET | **SKU RKND4**

Pressure Compensating Non-Drain Dripper – 1 GPH (4 LPH)

Pressure compensating non-drain dripper — delivers a consistent 1 GPH (4 LPH) and includes a built-in check valve that prevents the line from draining when the system shuts off. Ideal for sloped terrain where drip lines would otherwise drain through the lowest emitters after shutdown, causing uneven watering and erosion.

SPECIFICATIONS

Flow Rate	**1 GPH (4 LPH)**
Type	**Pressure Compensating, Non-Drain (Check Valve)**

FEATURES

- Pressure compensating — consistent 1 GPH output across pressure variations
- Non-drain check valve — prevents line drainage after shutdown; eliminates low-point flooding and high-point air ingestion on slopes
- Ideal for slopes — maintains even water distribution on terrain where gravity would otherwise drain the system through the lowest emitters
